

General Order

Department of Fire & EMS

G.O. #: 7-4-23

Subject: Station EMS Supplies

Date: July 20, 2023

Authority: Michael Stoner, Assistant Chief

Attached are the monthly EMS station inventory sheets. These inventory sheets are designed to account for and to replenish EMS supplies within the station's supply closet that were used in the previous month. When completing the monthly EMS inventory only those items stored in the extra supply or EMS closet shall be inventoried. The supplies within each station's extra supply inventory shall account for restocking of supplies for all apparatus to include fire suppression, EMS units, and utility or staff vehicles.

While this EMS supply inventory list is currently the same for all stations, it is anticipated that many stations will need to adjust the numbers allotted for many of the supplies. The goal of the monthly EMS supply inventory is to ensure adequate EMS supplies to restock equipment while reducing the number of expiring supplies. This EMS supply inventory list does not consider items that are damaged or lost through normal operations. Those supplies will need to be a one for one exchange or a lost report completed for missing equipment. While we are in the process of adjusting the supply numbers, please remember that all EMS chase cars have a small cache of supplies to restock and that the Shift Commander has 24/7 access to warehouse to restock as necessary.

Procedure:

1. Volunteer leadership should work with career staffing (as it becomes available in your station) to ensure that the EMS supply inventory sheets are completed by the 10th of each month. Our recommendation is that this be assigned to D shift career staff so that we can maintain consistency across the county.
2. Assigned personnel shall count and accurately document the number of each supply in the supply closet.
3. These sheets shall then be sent electronically to Assistant Chief of EMS at mstoner@carrollcountymd.gov. Once the quartermaster position is hired, they will be sent electronically to that individual.
4. Supplies that are needed by each station will then be packaged and either delivered to each station or a coordinated pick up by that station. Delivery should coincide with the shift or person that has placed the order if possible.
